Profile

Interdisciplinary researcher working across philosophy, literature, digital humanities, and computer science. My research examines how forms of representation—from literary narrative to computational media and data visualisation—shape knowledge, meaning, and aesthetic experience. I am particularly interested in digital narrative, AI-mediated storytelling, agency, and the ethical implications of computational systems. My background combines philosophical and literary analysis with postgraduate training in Digital Arts and Humanities and Computer Science, enabling both critical inquiry and the design and implementation of digital applications.

Education

Higher Diploma in Computer Science — South East Technological University, Ireland

Jan 2025 – Present | GPA: 78.6%

Relevant modules: Programming, Web Development 1 & 2, Databases, Systems & Networks, DevOps, Full-Stack Development 1 & 2

Final Project (in progress): Cinema Atlas — Interactive Film Data and Cultural Mapping Platform

Built a public digital collection of film records, images, reviews, and metadata.

Used React, Supabase, D3/ECharts, and the TMDB API to catalogue and map film data.

Supported user contributions, structured descriptions, metadata accuracy, and accessible content.

MA Digital Arts & Humanities — National University of Ireland, College Cork, Ireland

2023 – 2025 | First Class Honours

Dissertation: Ethics and Aesthetics of Digital Narrative — Examines how digital technologies transform literary form, arguing that digital narratives shift aesthetics from content back to form. Analyses the ethical implications introduced by computational processes and the datafication of knowledge. Drawing on Aristotelian concepts of form and purpose, it explores how digital systems reshape literary experience while emphasising the need to preserve critical and ethical perspectives within the humanities.

MA Philosophy — Pontifical University of Salamanca, Spain

2017 – 2019 | GPA: 8.59/10

Dissertation: Ethics, Epistemology, Metaphysics, and Aesthetics in Schopenhauer's Philosophy — This work examines the dual roots of human tragedy through Schopenhauer's system, integrating epistemology, metaphysics, ethics, and aesthetics, and situates the analysis within the tradition of critical philosophy, engaging with post-Kantian reflections on the limits of knowledge and their implications for ethical thought.

BA (Hons) Humanities — Pontifical University of Salamanca, Spain

2013 – 2017 | GPA: 8.85/10

Selected Projects

Cinema Atlas – Interactive Film Data Visualisation Platform [GitHub: edabelt/Cinema-Atlas](#) | [Live demo](#)

- Designed an interactive platform that moves from country-level genre trends and temporal release patterns to thematic relationships and source evidence for individual films
- Implemented linked visualisations in React, TypeScript, and D3 using TMDb data, including genre trends, a pausable release timeline, a theme constellation, and drill-down navigation

Movies App – React/TypeScript Single-Page Application [GitHub: edabelt/labMoviesApp](#) | [Live demo](#)

- Developed a React and TypeScript application for discovering movies and actors, with routing, pagination, filtering, reviews, favourites, and playlist management
- Implemented Supabase authentication, database persistence and file storage, React Query caching, Storybook component documentation, and production deployment on Vercel

The Wandering Desk – Full-Stack Travel and Workspace Discovery Platform

[GitHub: edabelt/thewanderingdesk-api](#) | [Live demo](#)

- Developed a multi-repository full-stack platform for discovering and managing remote-work and travel locations, combining interactive maps, place data, user accounts, image uploads, and weather-aware context
- Implemented a SvelteKit frontend with Leaflet maps, ECharts visual analytics, Firebase image storage, JWT authentication, MongoDB-backed CRUD workflows, Hapi.js backend services, and OpenWeather API integration

PlaceMark – Full-Stack Web Application [GitHub: edabelt/PlaceMark](#) | [Live demo](#)

- Developed a **database-driven application** with structured backend (models, controllers, routes)
- Implemented data persistence and user interaction features using MongoDB Atlas and server-side rendering

WeatherTop-IoT – Event-Driven IoT Pipeline [GitHub: edabelt/WeatherTop-iot](#) | [Live demo](#)

- Designed an **Event-Driven System** using MQTT for real-time telemetry processing and data flow handling
- Integrated messaging pipeline with Node.js backend for data ingestion and visualisation

WeatherTop – Full-Stack Web Application [GitHub: edabelt/WeatherTop](#) | [Live demo](#)

- Built a **data-driven application** with RESTful API integration and dashboards

- Processed and visualised real-time weather data using external APIs

Whether-Weather – Static Web Application [GitHub: edabelt/Whether-Weather](#) | [Live demo](#)

- Developed a **multi-page site** consuming APIs with responsive UI and clean layout

Technical Skills: Node.js, Express, Hapi, MongoDB, Mongoose, Python, MQTT, AWS, HTML, CSS, JavaScript

Professional Experience

2023 – Present

Web Developer (Freelance) — Remote

- Developed small-scale web applications and websites with responsive and user-focused UI using HTML, CSS, JavaScript, and Node.js, integrating APIs for dynamic content.

2017 – 2018

Librarian — Mariannhill Monastery, Durban, South Africa

- Digitised and organised collections, improving content accessibility and discoverability.
- Supported users and contributed to website content and information resources.

Languages

Spanish: Native

English: C1+ (Certified)

German: Intermediate B1 (Goethe Zertifikat)

Classical Languages: Reading knowledge of Greek and Latin

Volunteering

- **Transcribathon (Europeana)** — Digital heritage transcription, metadata enrichment, and archival description (2024–Present)
- **Community Support Volunteer, South Africa** — Supported children and youth in underserved communities (2017–2018)
